

A identical events, 150 GeV (log)

B width and tail metrics

metrics @150 GeV (same 1000 events):

core σ : srCFD 26.2 cfd05 28.6 ps

production: srCFD 25.6 cfd05 26.9 ps

robust IQR: srCFD 28.3 cfd05 28.7 ps

f_{tail} : srCFD 3.30% cfd05 4.60%

(Gaussian expectation 1.24%)

tail events: 46 $\rightarrow$ 33 of 1000

$\Rightarrow$ the gain lives in the non-Gaussian

tail, not the Gaussian core

C tail excess concentrates in clipped ev
